

GL CASE STUDY

FISHMONGERS HALL

2017

PROJECT: New Walk in Fridge, Walk in Freezer, Ice Machine, Foster Counter Fridges, New Door Frame Assembly for Existing Walk in Fridge

"I was very pleased with how the whole project was taken care of by Mark, Alan and their team and how it was delivered and installed on time. The unused storeroom was just a wasted space which has now been converted to a fully functional part of delivering our service to our clientele." Steve Pini – Director of Events & Executive Head Chef

New Refrigeration Equipment for Fishmongers Hall

Godfrey Lappage had great pleasure in providing this wonderful historic building with a quotation for a new Walk in fridge and walk in freezer, new ice machine, new counter fridges and a new door frame assembly for the existing walk in fridge to bring it back to looking like new. With great relationships with Foster Refrigeration, Foster Coldstores, RC Scutts and Hoshizaki Ice Machines the perfect solution was found for our client at Fishmongers Hall. Godfrey Lappage have maintained and serviced their refrigeration equipment for a number of years now, and a great relationship has been created. On our original site survey, we were asked if it was possible for a walk in fridge and a walk in freezer could be installed in an unused store room. After a thorough survey and various conversations between Godfrey Lappage, Foster Coldstores and RC Scutts, the perfect solution for this room was achieved to a very high standard. The head chef also requested taller shelving in both coldrooms which was no problem for the Godfrey Lappage team. The condensing units for these coldrooms were installed locally in the plant room and with adequate ventilation made available in this room, the condensing units work perfectly.

Fishmongers Hall

Energy Efficiency

The catering team at Fishmongers Hall also asked us to provide them with energy efficient counter fridges to replace their old counter fridges in the kitchen area. We therefore decided to go with the Foster G2 model. With their sleek design and great energy efficiency as well as their high reliability rating these counters were perfect for Steve and his team of catering staff. This Foster model of counter fridge has been approved to the ECA Scheme, therefore as all ECA products are guaranteed to be energy efficient, money can be claimed back on the purchase.

"Our installation team did us proud yet again with the neat installation which was carried out on this small project. Long and hard hours were carried out, but it makes it all worthwhile when you see the happy client and his catering team in full flow using the new equipment." Roger Smiles – Installation Manager at Godfrey and Lappage Services Limited
